

Dome Gold Mines

Jan 7th 2014

Dome Gold Mines' trading at 50% premium to IPO, Fiji gold, copper, iron ore

Dome Gold Mines' (ASX: DME) shares have been on a tear since listing on the Australian Stock Exchange in late October 2013.

Dome's value has increased by 50% since listing, which is an achievement in the recent difficult markets for junior explorers.

The company's share price closed at its all-time-high of \$0.30 yesterday, providing investors from the Initial Public Offering a handy paper gain, as the prospectus offered stock at \$0.20.

Dome has a unique focus on the Fijian gold, copper and iron ore sector, and holds a project which has potential to move rapidly towards feasibility and development during 2014-15.

Importantly the company is well supported by international investors, who have contributed over \$8 million to date.

Dome has an experienced board with Dr Garry Lowder serving as a chairman and non-executive director.

Lowder has playing key roles in the discovery of several mineral deposits, including the North Parkes copper, Cowal gold and Conrad silver deposits in NSW, the Paddington gold and Wodgina tantalum deposits in WA and the North Sulawesi porphyry copper deposits in Indonesia.

Drilling underway

In late-2013 Dome kicked off a new drilling program at its Nasivi Delta iron sand project to extend the onshore drill coverage to the northwest where the iron sand was most developed in previous drilling.

Once the 20 hole program totalling 600 metres across the western channel of the Nasivi River is completed, the company plans to test the offshore part of the delta, where Nasivi River sediment exists under shallow water.

The offshore part of the program is expected to start early in 2014 and take several months to complete.

Dome expects early results from the program to be available during February 2014.

Nasivi Delta is a mineral sand project containing abundant heavy metals including magnetite and gold. The company is targeting production to begin within two years by using conventional dredging.

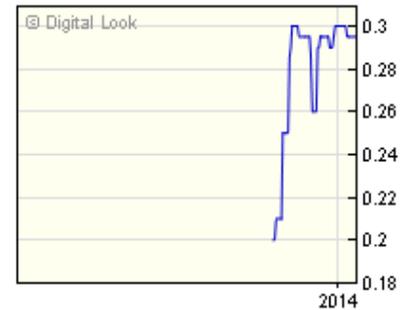

Its other projects in Fiji are the Kadavu epithermal gold project, which bears similarities to the Emperor Gold Mine at Vatukoula, and the Nadrau porphyry copper-gold project, which may be like that at the nearby Namosi copper-gold porphyry deposit.
